

- 40 MHz to 50+ GHz Operation
- <1% Total Mass Loss per ASTM E595 Outgas Testing
- Current Ratings now up to 10 Amps

# BROADBAND CONICALS

## Inductor Solutions for High Frequency Applications

Gowanda's flying lead (thru-hole) and SMT (surface mount) broadband conical inductors offer predictable frequency response and repeatable performance from 40 MHz to 50+ GHz with current ratings up to 10 Amps and <1% TML & <0.10 CVCM per ASTM E595 outgassing test. These conicals are specifically designed for high frequency applications where ultra-low insertion loss & return loss are design requirements. Their unique construction helps to limit the effects caused by stray capacitance. Reliability to M83446D, upscreening capability to MIL-STD-981, unique footprints and both standard & custom design options enhance utility. For assistance please call +1-716-532-2234 or email sales@gowanda.com.

### NOTES

- Operating Temperature Range: -55°C to +125°C
- Current Rating is based on a 100°C temperature rise at an ambient temperature of 25°C (for C102SM and C182SM); for all other surface mount series it is based on a 35°C temperature rise at an ambient temperature of 90°C
- All non-tolerance and electrical data are reference only and based on nominal data
- Terminations: gold and RoHS compliant
- Terminal is elongated to allow for soldering close to the tip of the coil
- Recommended that component is epoxied to substrate before reflow soldering
- Meets a TML (Total Mass Loss) requirement of 1.0% maximum when tested in accordance with ASTM E595; this calculation does not include WVR (Water Vapor Recovered).

## Conicals with Current Ratings up to 10 Amps

### Gowanda's Design Provides Highest DC Current Handling Capability in the Industry

Gowanda Electronics now offers flying lead broadband conical inductors with up to 10 Amps of DC current handling - the highest level in the industry - and low insertion loss. The four series - C305FL, C550FL, C750FL and C1000FL - were developed to address market needs and industry trends calling for ever-increasing performance from broadband conical components. Gowanda's series are utilized in communication applications for bias T's (filter signals, remove noise), broadband chip manufacturing, communication platforms, high frequency, microwave circuitry, RF test set-ups, test & measurement, test gear, test instrumentation and transmission amplifiers.

As with Gowanda's previously introduced conicals, these series offer excellent robust construction to assure predictable frequency response and repeatable RF performance. The unique broadband response of the coil is attributed to its precision winding, wire selection and coil configuration.

One Magnetics Parkway  
Gowanda, New York 14070, USA
